

GIF LIBRARY – GONZALO GARCÍA

1. Description

The Gif Library is a small Laravel web application that allows registered users to enjoy and share all kind of funny graphical content.

Unregistered users can only see the home page. Any other view of the app requires authentication.

After signing in, users can go on and log in. Once logged, they can see their own profiles, with the pictures they have already submitted, or hit the “Add new Gif” button and upload their own content. Gifs are stored locally.

2. Stack

Composer | Laravel | PHP | Node | NPM | JavaScript

The implementation of React was not possible because of the tight schedule. However, React was installed and implemented in the app, so it is possible to create components and follow the React logic in any of the pages of the website.
